

Football

Characteristic

Purpose of the game:

The goal of the game is to get the ball by mental arithmetic in the goal of the opponent.

Age group:

From 7th grade (depending on the difficulty level of the tasks)

Number of players:

2-8 players (2 groups of 1-4 players)

Needed material:

Matchfield,
a character,
task cards

Manufacturing

Material:

Construction paper in four different colors,
edding,
Scissors,
glue,
Paper,

Pens in blue, red and black

How do I make the game?

Step 1: Cut a large rectangle from one of the four clay papers (in our case, it's blue).

Step 2: Use the Edding to paint the football field lines on the (blue) construction paper.

Step 3: Cut out three small circles and one rectangle in two different colored tonal papers (in our case orange and red).

Step 4: For the center of the last construction paper (in our case: gray) cut out a slightly larger circle.

Step 5: Stick the cut out parts as shown in the picture.

Step 6: Write Mathematical Tasks of Different Difficulties on the Cards. The most difficult tasks are written in blue, the middle tasks in red and the simplest tasks in black (there should be the most simple tasks)

Users Manual

There are two teams that sit in opposite of each other right behind their goal. The character which is the ball is half to be placed in the center. The captain begins to read out a task. There he can choose between a black and a red task card. The Team who answers the question first is then allowed to move the ball in the direction of its opponents goal. If it is a black card the ball is moved one space, if it is a red card the ball is moved to spaces.

As soon as the ball is in the penalty area of a team, a blue card is counted to get into the goal. However, if the opposing team wins, the ball moves back two spaces.

Have fun playing!
